RESEARCH INTERESTS	<p>My research focuses on “data science for urban innovation” pursuing data-driven explanation and prediction on co-evolution of cities and technology, at the intersection of data science, computational social science, and complex systems. I am particularly interested in social impacts of technology (especially, AI), urban computing, and the application of natural language processing &amp; network science.</p> <p><b>Social impact of technology (AI):</b> How will AI be implemented, and what is the impact?</p> <ul style="list-style-type: none"><li>• AI, climate and future of work / Evolution of AI / AI and communications.</li></ul> <p><b>Urban Computing:</b> How can data science help find, explain, and solve urban problems?</p> <ul style="list-style-type: none"><li>• Autonomous driving and urban mobility / Urban imagery / Urban issue finder.</li></ul> <p><b>NLP &amp; Network Science:</b> How can NLP and network science extend the reach of data science?</p> <ul style="list-style-type: none"><li>• Text embedding / Graph embedding / Satellite imagery.</li></ul>
